

QUIZ NO: 339

TOPIC: WATER SUPPLY ENGINEERING

DATE: 12/09/2020

1. The natural process under which the flowing river water gets cleared is known as _____?

- [A] Oxidation
- [B] Self purification
- [C] Photosynthesis
- [D] None of these

Answer : B

2. The equipment used for checking the levels of sewer invert is _____?

- [A] Theodolite
- [B] Compass
- [C] Plane table
- [D] Boning rod

Answer : D

3. The phenomenon by virtue of which a soil is clogged with sewage matter is called_____?

- [A] Sewage farming
- [B] Sewage sickness
- [C] Sewage bulking
- [D] None of these

Answer : B

4. Which of the following is an anaerobic process for treating sewage?

- [A] Oxidation pond
- [B] Imhoff tank
- [C] Oxidation ditch
- [D] Rotating biological contactors

Answer : B

5. A grit chamber having a high detention period of about 3 to 4 minutes is known as _____?

- [A] Grit basin
- [B] Detritus tank
- [C] Vacuator
- [D] Grit channel

Answer : B

6. In which zone DO concentration falls down to zero?

- [A] Zone of recovery
- [B] Zone of active decomposition
- [C] Zone of degradation
- [D] Zone of clear water

Answer : B

7. The lowest point of the interior of a sewer or drain at any cross section is known as _____?

- [A] Barrel
- [B] Manhole
- [C] Invert
- [D] Haunching

Answer : C

8. Leachate is a coloured liquid that comes out of _____?

- [A] Septic tank
- [B] Imhoff tank
- [C] Aerated lagoons
- [D] Sanitary landfills

Answer : D

9. The first stage of the neutral process of sludge digestion is_____?

- [A]Acid regression
- [B]Alkaline fermentation
- [C]Acid fermentation
- [D]None of these

Answer : C

10.Aerosols are defined as?

- [A]Finely divided droplets or solid particles
- [B]Finely divided liquid droplets
- [C]Solid particles
- [D]Toxic gases

Answer : A
